

# Ice Suncatcher

## Winter

Owned and managed by

**EASTLEIGH**  
BOROUGH COUNCIL

When the temperature is below zero take the opportunity to make an ice suncatcher

### You will need:

- Shallow foil or plastic container
- Berries and leaves
- String
- Water

### Instructions:

1. Collect small leaves, berries and feathers etc on a walk
2. Place the natural items in the container
3. Wind the string around the inside edge of the container then pour water in to cover all the items. Make sure the wound string sits below the waterline and the end hangs outside of the pot
4. Leave outside overnight to freeze and then remove from the container and hang up somewhere you can view it
5. Watch as it melts slowly and each item drops out (make sure you hang it somewhere where it does not matter if it drips)
